(Please see the map for available area.)

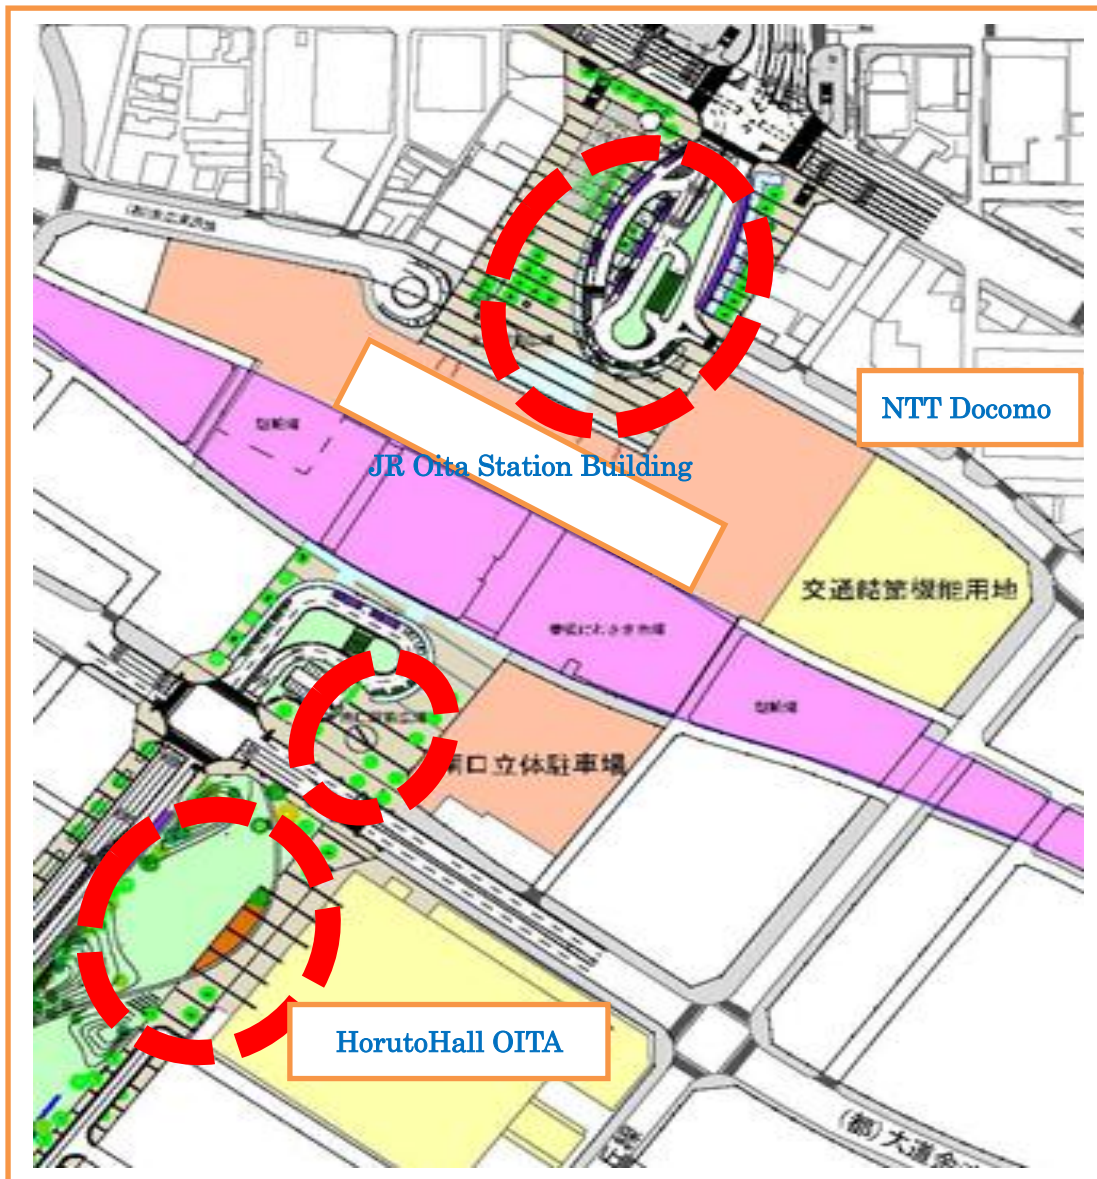

Oita City public wireless LAN service Onsen Oita Wi-Fi trial operation has started along with the Destination Campaign Oita, the Onsen Capital of Japan launching on July 1st, 2015.

This service provides visitors from both inside and outside Japan with internet environment for searching for information about accommodation, tourist attraction, gourmet of Oita.

At this moment, the service is limited Oita Station area, however Oita City will evaluate the effectiveness of the operation and will consider expanding the service at major tourist destinations in Oita City.

Where is the service available?

The service is available in the area circled in red on the map.

Security Precautions

This service is operated by the internet connecting system of Oita Cable Telecom Co., Ltd. that Oita City contracted.

The service does not employ encryption system such as WEP in order to open the service to a wide range of users including visitors from foreign countries.

Due to this, there is a risk that the communication contents may be intercepted between the terminal and the access point. Please note that the personal information the user inputs, such as user name or password, may be stolen.

This service may block hazardous sites and communication pressing bands.

Online game devices are unable to be connected to the service.

Oita City and Oita Cable Telecom Co., Ltd. will not bear any responsibility for any losses or conflicts by causing using the service.

There are times the service is not available temporarily due to the maintenance of installed equipments.
